EDUCATION

The University of Texas at Austin – Austin, Texas

B.S. in Mechanical Engineering; Minor: Computer Science

December 2027

- GPA: 3.78

EXPERIENCE

SpaceX (Starbase, Texas) - *Booster Integration Engineering Intern*

May 2026 – August 2026

- Re-designed 13,000+ component test assembly sealing Starship Booster's feedlines during Cryogenic-Proof testing
- Directed \$800,000 in machined part procurement, running daily vendor calls to coordinate delivery
- Ran a daily stand-up and authored a daily status update to 80+ stakeholders including top management
- Led 25 technicians during subassembly build and vehicle integration daily
- Saved over 1100 production hours per vehicle through design rate improvements

Longhorn Racing Electric FSAE (Austin, Texas) – *Brakes and Unsprung Engineer*

July 2024 – May 2026

- Owned rear wheel hub assembly and performed static structural FEM to analyze features
- Implemented a Vernier scale on center lock nut to properly positively lock the assembly
- Determined hub-nut thread engagement with thread-stripping calculations
- Sized brake rotor geometry using tire-grip calculations and thermal analysis on the features
- Performed wheel assembly bearing selection using SKF SimPro Quick
- Lectured 20 members on solid mechanics fundamentals

SpaceX (Starbase, Texas) - *Structures Build Engineering Intern*

January 2025 – August 2025

- Designed the build procedure, fixturing and lift tooling, rigging and integration plans for a welded propulsion manifold on the V3 Starship
- Designed a tool improving work access and integration for aft flap torque frames on the Starship
- Responsible for root cause analysis and re-design of 5 retro-fitted flight parts
- Served as manufacturing engineer responsible for keeping production unblocked for 5000 hours of tech labor

Longhorn Racing Electric FSAE (Austin, Texas) - *Suspension Engineer*

August 2023 – May 2024

- Designed a discrete adjustment attachment on suspension to adjust ride height without using rod-ends
- Composites manufacturing for a carbon fiber push rod, controlling for a 5 tenths bond line gap to the end plugs
- Manual turning and milling for steel control arm assembly
- Redesigned suspension apexes to mount pushrods through gussets rather than a bulky steel plate, simplifying the mounting geometry and analyzed geometry with structural FEM

Community Involvements

Neighborhood Longhorns (Austin, Texas) – *Math Tutor*

January 2026 – May 2026

- Tutored four 6th-grade students weekly for an hour in math
- Contributed to a 23.7% increase in students' STAAR math testing results between the 2025 and 2026 school years

Texas Wranglers (Austin, Texas) – *Alumni Liaison*

September 2023 – Present

- Coordinate events with alumni and support backend development/outreach for the organization's alumni database
- Appointed by the VP of the organization to serve anonymously on the Texas Wranglers Disciplinary Board
- Assisted disabled veterans at an Easterseals gym for 100+ hours by cleaning and helping gymgoers access machines
- 50+ hours of caretaking with On the Moov Student Accessibility Initiative helping care for a disabled UT student

ADDITIONAL

Honors: Glenn and Nancy Gilkey Endowed Scholarship in Mechanical Engineering Recipient, Selected for Tau Beta Pi Engineering Honors Fraternity, Eagle Scout with Bronze Palms

Computer Skills: SOLIDWORKS CAD & CAM, Python, Microsoft Office, Fusion 360, SKF SimPro Quick, MATLAB

Certifications: Machine Shop, 3D Printing, Laser Cutting

Interests: Tennis, endurance running, college football, alto saxophone
